## A National Statistics publication

National Statistics are produced to high professional standards set out in the [Code of Practice](#) for Official Statistics. They are produced free from political influence.

The United Kingdom Statistics Authority has designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the Code of Practice for Official Statistics.

Designation can be broadly interpreted to mean that the statistics:

- meet identified user needs;
- are well explained and readily accessible;
- are produced according to sound methods, and
- are managed impartially and objectively in the public interest.

Once statistics have been designated as National Statistics it is a statutory requirement that the Code of Practice shall continue to be observed.

## About us

### The Office for National Statistics

The Office for National Statistics (ONS) is the executive office of the UK Statistics Authority, a non-ministerial department which reports directly to Parliament. ONS is the UK government's single largest statistical producer. It compiles information about the UK's society and economy, and provides the evidence-base for policy and decision-making, the allocation of resources, and public accountability. The Director-General of ONS reports directly to the National Statistician who is the Authority's Chief Executive and the Head of the Government Statistical Service.

### The Government Statistical Service

The Government Statistical Service (GSS) is a network of professional statisticians and their staff operating both within the Office for National Statistics and across more than 30 other government departments and agencies.

## Overview of the UK Economic Accounts

The UK Economic Accounts (UKEA) provides detailed estimates of national product, income and expenditure, UK sector accounts and UK balance of payments. UKEA is published at quarterly, [pre-announced](#) intervals alongside the [Quarterly National Accounts](#) and quarterly [Balance of Payments](#) statistical bulletins.

The UKEA includes income, capital and financial accounts which are produced for non-financial corporations, financial corporations, central government, local government and households and non-profit institutions serving households (NPISH) sectors, and for the UK. Financial transactions and balance sheets are produced for the rest of the world sector in respect of its dealings with the UK. These accounts are the underlying data that produce a single estimate of gross domestic product (GDP) using income, production and expenditure data.

The accounts are fully integrated, but with a statistical discrepancy, known as the statistical adjustment, shown for each sector account. This reflects the difference between the sector net borrowing or lending from the capital account and the identified borrowing or lending in the financial accounts, which should theoretically be equal.

## The integrated economic accounts

The integrated economic accounts of the UK provide an overall view of the economy. [Table I.1 \(34 Kb Excel sheet\)](#) presents a summary view of the accounts, balancing items and main aggregates and shows how they are expressed.

The accounts are grouped into 4 main categories

- the goods and services accounts
- current accounts
- accumulation accounts
- balance sheets.

All the above accounts appear in the annual UK National Accounts (Blue Book) publication. Due to time constraints and availability of data, the quarterly UKEA does not publish the goods and services

account, or the first account of the current accounts (the production account), but the remaining accounts (Accounts II to V) are published.

Further information can be found in [an introduction to UK sector accounts](#)

## **1. Current account**

### **a. The distribution and use of income accounts (Account II)**

The distribution and use of income account shows the distribution of current income (value added) carried forward from the production account and has saving as its balancing item (B.8). Saving is the difference between income (disposable income) and expenditure (or final consumption).

The distribution of income is broken down into 3 sub-accounts

- the primary distribution of income
- the secondary distribution of income
- the redistribution of income in kind.

#### **i. The primary distribution of income account**

Primary incomes are accrued to institutional units due to their involvement in production or their ownership of productive assets, including:

- property income (from lending or renting assets)
- taxes on production and imports.

And excluding:

- taxes on income or wealth
- social contributions/benefits
- other current transfers.

The primary distribution of income shows the way these are distributed among institutional units and sectors. The primary distribution account is divided into 2 sub-accounts – the generation and the allocation of primary incomes.

#### **ii. The secondary distribution of income account**

The secondary distribution of income account shows how the balance of primary incomes for an institutional unit or sector is transformed into its disposable income by the receipt and payment of current transfers (excluding social transfers in kind).

The 2 further sub-accounts (the use of disposable income and the use of adjusted disposable income) look at the use of income for either consumption or saving.

#### **iii. The redistribution of income in kind**

The redistribution of income in kind account shows how gross disposable income of households and non-profit institutions serving households and of government are transformed by the receipt and payment of transfers in kind. The balancing item for this account is adjusted gross disposable income (B.7g).

## **2. The accumulation accounts (Accounts III and IV)**

The accumulation accounts cover all changes in assets, liabilities and net worth. The accounts are structured into 2 groups.

The first group of accounts (Account III) cover transactions which would correspond to all changes in assets or liabilities and net worth that result from transactions and are known as the capital account and the financial account. They are distinguished to show the balancing item net lending/borrowing.

The second group of accounts (Account IV) relate to all changes in assets, liabilities and net worth due to other factors, for example, the discovery or re-evaluation of mineral reserves, or the reclassification of a body from one sector to another.

### **a. Capital account (Account III.1)**

The capital account concerns the acquisition of non-financial assets (income creating or wealth only) such as fixed assets or inventories, financed out of saving, and capital transfers involving the redistribution of wealth. Capital transfers include, for example, capital grants from private corporations to public corporations.

The account shows how savings finance investment in the economy. In addition to gross fixed capital formation and changes in inventories, it shows the redistribution of capital assets between sectors of the economy and the rest of the world. If the balance on the account is negative, it is described as net borrowing and measures the net amount a unit or sector is obliged to borrow from others. If positive, the balance is described as net lending and measures the amount the UK or a sector has available to lend to others. This balance is also referred to as the financial surplus or deficit and the net aggregate for the 5 sectors of the economy equals net lending/borrowing from the rest of the world.

### **b. Financial account (Account III.2)**

The financial account shows how net lending and borrowing are achieved by transactions in financial instruments. The net acquisitions of financial assets are shown separately from the net incurrence of liabilities. The balancing item is net lending/borrowing. In principle, net lending or borrowing should be identical for both the capital account and the financial account. In practice, however, due to errors and omissions this identity is very difficult to achieve for the sectors and the economy as a whole. The difference is known as the statistical discrepancy.

### **c. The balance sheet (Account IV)**

The second group of accumulation accounts complete the sequence of accounts. Included in these accounts are the balance sheets and a reconciliation of the changes that have brought about the change in net worth between the beginning and end of the accounting period. The opening and closing balance sheets show how total holdings of assets by the UK or its sectors match total liabilities and net worth (the balancing item). Net worth equals changes in assets less changes in liabilities.

Various types of assets and liabilities can be shown in detailed presentations of the balance sheets. Changes between the opening and closing balance sheets for each group of assets and liabilities result from transactions and other flows recorded in the accumulation accounts, or reclassifications and revaluations.

## The rest of the world account (Account V)

The rest of the world account covers the transactions between resident and non-resident institutional units and the related stocks of assets and liabilities. Written from the point of view of the rest of the world, the account is similar in role to an institutional sector.

## Codes used in tables

The codes used are consistent with the European System of Accounts, revised 2010 (ESA2010).

The ESA 2010 code for each series is shown in the left-hand column, using the following prefixes

- S for the classification of institutional sectors,
- P for transactions in products,
- D for distributive transactions,
- F for transactions in financial assets and liabilities,
- K for other changes in assets,
- B for balancing items and net worth.

Within the financial balance sheets, the following prefixes are used

- AF for financial assets/liabilities

More information on ESA2010, along with a [downloadable manual](#), can be found on the [European Union's Eurostat page](#)

## Financial intermediation service charge indirectly measured

Financial intermediation service charge indirectly measured (FISIM) is the process whereby a financial institution such as a bank accepts deposits from units (people and institutions) wishing to receive interest on funds, and lends them to units wishing to borrow.

The bank acting as an intermediary provides a mechanism to allow the first unit to lend to the second. The unit lending funds accepts a rate of interest lower than that paid by the borrower. A 'reference rate' of interest is the rate at which both lender and borrower would be happy to strike a deal. The difference between interest calculated at the reference rate and interest actually paid to depositors and charged to borrowers is a financial intermediation service charge indirectly measured. Total FISIM is the sum of the implicit fees paid by the borrower and the lender.

FISIM are produced by deposit-taking corporations except the central bank (S.122); and other financial intermediaries, except insurance corporations and pension funds (S.125).

Interbank FISIM are the FISIM produced between financial intermediaries (FIs). By convention, no interbank FISIM has to be calculated between resident FIs, nor between resident FIs and non-resident FIs. FISIM are calculated in respect of non-bank user institutional sectors only. FISIM are allocated into intermediate and final consumption.

There is a full description of the implementation of FISIM in the article, [‘Improving the measurement of banking services in the UK National Accounts. Economic and Labour Market Review’](#),

## Quality

### Important quality issues

Common pitfalls in interpreting series are;

- expectations of accuracy and reliability in early estimates are often too high
- revisions are an inevitable consequence of the trade off between timeliness and accuracy
- early estimates are based on incomplete data

Very few statistical revisions arise as a result of 'errors' in the popular sense of the word. All estimates, by definition, are subject to statistical 'error', but in this context the word refers to the uncertainty inherent in any process or calculation that uses sampling, estimation or modelling. Most revisions reflect either the adoption of new statistical techniques, or the incorporation of new information which allows the statistical error of previous estimates to be reduced. Only rarely are there avoidable 'errors' such as human or system failures, and such mistakes are made clear when they do occur.

### GDP quarterly alignment adjustments

To improve the coherence of the quarterly accounts, adjustments are made to quarterly estimates of both the expenditure and income analyses of GDP for 1983 onwards. These adjustments, which sum to zero across each complete year, are attributed to the change in inventories component of GDP analysed by expenditure and to gross operating surplus of companies component analysed by income. These adjustments may be considered as allowing for timing differences in the recording of transactions in different parts of the economy.

In addition, accurate quarterly measurement is more difficult for the changes in inventories component. These quarterly adjustments modify the aggregates derived from expenditure or income components to better reflect the quarter-to-quarter paths of the output measure of GDP.

### Income, product and spending per head

The annual per head data in Table 1.1.5 is calculated using mid-year population estimates. The quarterly per head series will not sum to the annual total as the quarterly series use constructed population numbers estimated using successive annual mid-year population figures.

### National Accounts methodology and articles

We regularly publish [methodological information and articles](#) to give users more detailed information on developments within the National Accounts. We also publish supplementary analyses of data to help users with the interpretation of statistics and guidance on the methodology used to produce the National Accounts.

### National Accounts classification decisions

The UK National Accounts are produced under internationally agreed guidance and rules set out principally in the [European System of Accounts \(ESA 2010\)](#) and the accompanying [Manual on Government Deficit and Debt - Implementation of ESA 2010 to 2014 edition \(MGDD\)](#).

In the UK, ONS is responsible for the application and interpretation of these rules. Therefore ONS makes [classification decisions](#) based upon the agreed guidance and rules, and these are published on our website.

### Economic context

ONS publishes a monthly [Economic Review](#) discussing the economic background, giving economic commentary on the latest GDP estimate and our other economic releases.

### Confidentiality

We are committed to ensuring all information provided is kept strictly confidential and will only be used for statistical purposes. Further details regarding confidentiality can be found in the respondent charters for [businesses](#) and [households](#) on our website.

### Notes

1. Most quarterly data are available seasonally adjusted: those not seasonally adjusted are indicated.
2. Rounding may lead to inconsistencies between the sum of constituent parts and the total in some tables.
3. 'Billion' denotes one thousand million.
4. Symbols used:
  - .. not available
  - nil or less than half the final digit shown

### Periods covered

- 'Q1' or 'Quarter 1' refers to the first quarter of the calendar year, and includes the months January, February and March
- 'Q2' or 'Quarter 2' refers to the second quarter of the calendar year, and includes the months April, May and June
- 'Q3' or 'Quarter 3' refers to the third quarter of the calendar year, and includes the months July, August and September
- 'Q4' or 'Quarter 4' refers to the fourth quarter of the calendar year, and includes the months October, November and December

### Background notes

Details of the policy governing the release of new data are available by visiting the [Statistics Authority code of practise webpage](#) or from the Media Relations Office email: [media.relations@ons.gsi.gov.uk](mailto:media.relations@ons.gsi.gov.uk)

These National Statistics are produced to high professional standards and released according to the arrangements approved by the UK Statistics Authority.

### Special events calendar

ONS has a [policy](#) on special events and maintains a special events [calendar](#). Special events are events that are identifiable, do not occur on a regular cycle and have at least the potential to have an impact on statistics.

## Notices for this publication

### Corrections

**30th October 2015, 9:30**

#### Consumption of fixed capital

As previously stated, ONS discovered an error in the estimates of consumption of fixed capital published in table 1.1.12 of the UK Economic Accounts on 30 September and withdrew the estimates.

Furthermore, this error affected data in UKEA table 1.1.5. The series affected were MWB6, MWB7 and MWB8, and these were also removed. The error has now been rectified and the corrected estimates have been reinstated.

ONS apologises for any inconvenience caused.

### Notice of change to time series data identifiers

Series identifiers for Gross National Income at market prices in table 1.1.1 of this publication have changed for this release (30th September 2015).

Series KH6W, KH6Y and KH72 have changed to KH6X, KH6Z and KH73 respectively.

These series relate to latest year on previous year percentage change, latest quarter on previous quarter percentage change and latest quarter on corresponding quarter of previous year percentage change.

1 Estimates cannot be regarded as accurate to the last digit shown.

2 Components of output are valued at basic prices, which excludes taxes and subsidies on production.

3 Weights may not sum to the totals due to rounding.

1 The residual error is, by convention, the amount by which the expenditure-based approach to measuring GDP exceeds the income-based estimate. It is also the sum of two components: the statistical discrepancy (expenditure) with sign reversed, and the statistical discrepancy (income) with natural sign.

2 Income data deflated by the implied GDP deflator, based on expenditure data.

1 Interest payments in the National Accounts are separated into two elements; the underlying interest charge and the financial service charge. Interest under D.41 in the allocation of primary income is measured separately to the service charge element of the transaction. Users of this table are advised to also use the individual sector tables which show the actual interest payments and receipts of each of the institutional sectors.

1 Using series YBHA: GDP at current market prices

2 When downloading data from the UKEA dataset users should reverse the sign of series that have an identifier that is prefixed with a minus sign.

3 This series represents net errors and omissions in the balance of payments accounts. It is the converse of the not seasonally adjusted current and capital balances (HBOG and FKMJ) and net financial account transactions (HBNT) and is required to balance these three accounts.
